

## EOR Draft-Assist — *You sign; we accelerate.*

Your monthly TSF draft in  $\leq 48$  hours — built from the final survey drop (and complete bundle), in your Word template, with click-through provenance.

$\leq 48$ h draft turnaround (*timer starts at final survey drop + complete bundle*) · Track Changes + low edit count · Provenance PDF for every figure/table

$\leq 48$ h

### EOR non-negotiables (what we optimize for)

- **Your template, your numbering.** Word/PDF exactly in your style guide; figures/tables carry units + CRS/vertical/epoch.
- **Track Changes by default.** Target  $\leq 10$  edits to finalize per cycle; we learn from your edits.
- **Provenance you can cite.** Every figure/table clicks to Source → QC → Transform → Figure (provided as a Provenance PDF).
- **Edit proof (pilot):** "Median edits across last 2 cycles: \_\_\_\_." (We track & report this.)

### Monthly flow at a glance — Ingest/QC → Change Cards → Draft

- **Ingest/QC:** auto-align units/timebases/epoch; flag gaps/drift/outliers; no reformatting.
- **Change Cards:** top deltas (movement, pore-pressure, pond/volume, GNSS) with TARPs.
- **Draft:** Word/PDF in your template + figure pack, CSV, and Provenance PDF.

### What we need to start (one email)

Template DOCX + figure list · TARPs + CRS/vertical/epoch · last month's piezos/GNSS/drone/bathy · data owners (time-series & survey)

### EOR independence & access

- **Evaluation access for EORs is free** (named EOR seats during pilot + subscription).
- **No referral payments to individuals.** Any credits apply to the operator.

### Try it fast (no risk)

**Shadow Draft (7 days):** Send last month's bundle + your template under MNDA → we return a draft to review.

### 30-day pilot (binary gate):

- **Two  $\leq 48$ h drafts** (from the final survey drop of a complete bundle)
  - **$\geq 2$  feeds live** (e.g., piezos + GNSS + survey drop)
  - **$\leq 10$  EOR edits total to finalize**
  - **$\geq 1$  novel, actionable finding OR "quiet month"** with **0 false positives** and  $\leq 10$  edits
- If we miss the gate twice → pilot fee credited/refunded*

### Chain-of-custody & versioning

- **Time-stamped inputs;** bundle hash recorded in the Provenance PDF.
- **Immutable clock log:** final survey drop → draft delivered.
- **Read-only collectors;** no control-system access.

### Deployment & data

- **Default after pilot:** Stellatus-managed **private SaaS** (ring-fenced enclave) for iteration and scale (pilot can run in your tenant; subscription migrates to SaaS unless otherwise contracted).
- **Ownership:** you own raw & processed data.
- **Decision-support only:** you retain sign-off.
