

EOR Draft-Assist — You sign; we accelerate.

Your monthly TSF draft in ≤ 48 hours — timer starts at final survey drop + complete bundle. Output is your Word template with Track Changes and a Provenance PDF (click any figure to see Source \rightarrow QC \rightarrow Transform \rightarrow Figure).

Why EORs use this

- Offload assembly/formatting \rightarrow focus on review & judgement
- Predictable cadence: two ≤ 48 h cycles in a 30-day pilot (money-back gate)
- Defensibility: chain-of-custody (time-stamped inputs, bundle hash, immutable clock log)

What we need (one email)

Template DOCX + figure list · TARPs + CRS/vertical/epoch · last month's piezos/GNSS/drone/bathy · data owners (time-series & survey)

Try it (no risk)

- Shadow Draft in 7 days from last month's bundle (under MNDA)
- 30-day pilot — pass/fail: two ≤ 48 h drafts; ≥ 2 feeds; ≤ 10 edits; ≥ 1 novel finding or quiet month (0 false positives)

EOR independence & access

Free named EOR seats (pilot + subscription). No referral payments to individuals; any credits apply to the operator.

CTA: Reply with "MNDA + sample" and we'll book a 60-min working session.
