Figures, CSV, provenance

30-Day Pilot (Binary, Money-Back)

- **Week 0:** Shadow Draft in 7 days
- **Days 8-30:** Two live Draft-in-48
- **Success gates:**
- ✓ Two ≤48h drafts (from final survey drop)
- ✓ ≥2 data feeds integrated
- ✓ ≤10 EOR edits to finalize
- ✓ ≥1 novel actionable finding
- **Pass:** Credit to Year 1
- **Miss twice:** Full refund

Quantified ROI (Typical)

≤48h
vs 8-20 days

40-70%
Hours Reduction

$0
CapEx to Start

Ranges reflect measured pilots; methods available on request.

What We Ingest (No Reformatting Required)

• Piezometer time series (VWP, standpipe) • GNSS/RTK monuments • Drone orthos, DSM, point clouds • Bathymetry survey points • Optional later: InSAR, weather, seepage

Comparison Snapshot

Metric	Traditional	With Stellatus	Impact
Draft Time	8–20 days	**≤48 hours**	10× faster
Manual Work	40–80 hrs/month	**40–70% reduction**	Fewer hours
Contractor	Critical blocker	**Off critical path**	Predictable
Anomalies	Visual checks	**Automated cards**	Fewer misses

Why We're Different

Technical Excellence

- EOR-ready output in their template
- Provenance chain for every number
- Vendor-neutral sensor compatibility
- Platform learns from your edits
- Scales across multiple TSFs

Security & Control

- Read-only collectors (no control risk)
- Decision-support only positioning
- You own raw & processed site data
- Optional: license de-identified features
- Contracts cap liability exposure

Deployment & Security

Default after pilot: Stellatus-managed private SaaS (ring-fenced enclave)

Pilot/exception: Your cloud tenant; expectation to migrate to private SaaS at subscription unless otherwise contracted

Hybrid: Edge + cloud analytics on request

Air-gapped/on-prem: Available on request

Decision-support only — Your EOR retains sign-off authority

Addressing Common Concerns

"Our EOR won't trust third-party analytics"
This is their draft in their template—we accelerate it with full provenance.

"We already have monitoring software"
Great—we integrate with it. Our value is the 48h draft across all data streams.

"What about liability?"
Decision-support only. Contracts cap exposure. You maintain control.

"How do you handle bad data?"
Auto-QC flags gaps, drift, outliers. You review and approve all outputs.

Measured Success

Cycle Time	Internal Labor	Contractor Reliance
8-20 days → ≤48h	40-70% reduction	Removed from critical path
